

ECU Programming & Advanced Diagnostics

Vehicle Diagnostics

Product / Service Overview

Computer-assisted fault diagnosis, module coding and programming support for modern vehicles and fleet operators.

Key Specifications

Coverage:	Model and system coverage depends on vehicle platform
Diagnostics:	Full-system scanning and live-data analysis
Programming:	ECU coding, adaptation and module configuration where supported
Reports:	Fault findings and recommended actions
Service type:	Workshop or scheduled fleet support
Preparation:	Vehicle identification and prior repair history requested

Applications

- Engine and transmission faults
- ABS and airbag systems
- Electrical and communication faults
- Module replacement coding
- Fleet technical support
